Led by the renowned captain Karl Koldewey, the expedition set sail from Bremerhaven on May 24th, 1868, aboard the steamship Grönland. Their

mission was not only to reach the North Pole, but also to conduct scientific research and gather valuable knowledge about this enigmatic region.

Into the Frozen Wilderness

As the Grönland ventured further north, the crew encountered towering icebergs, some as tall as skyscrapers. These colossal walls of ice presented both challenges and opportunities, forcing the explorers to navigate treacherous channels while also providing valuable samples for scientific study.

The expedition eventually reached the edge of the pack ice at 80 degrees north latitude, marking a significant milestone in German polar exploration. From there, they continued on foot and by boat, pushing into the uncharted territories of Greenland's icy interior.

Scientific Discoveries and Human Drama

Beyond its geographical accomplishments, Die Erste Deutsche Nordpolar Expedition Im Jahre 1868 made groundbreaking scientific discoveries. The explorers collected specimens of Arctic flora and fauna, studied the region's geology and meteorology, and documented the indigenous cultures they encountered.
