- The Industrial Revolution
- Modern Makers

Early Makers

The earliest makers were often artisans and craftsmen who used their skills to create objects for everyday use. They were also responsible for many of the early innovations that led to the Industrial Revolution.

One of the most famous early makers was Leonardo da Vinci. Da Vinci was a painter, sculptor, architect, engineer, and inventor. He is best known for his paintings, such as the Mona Lisa and The Last Supper, but he also made significant contributions to the fields of engineering and science.

Another important early maker was James Watt. Watt was a Scottish inventor who developed the steam engine. The steam engine was a major factor in the Industrial Revolution, and it helped to power the factories and transportation systems that transformed the world.

The Industrial Revolution

The Industrial Revolution was a period of great change in the way that goods were produced. Prior to the Industrial Revolution, most goods were made by hand by skilled artisans. However, the advent of new technologies, such as the steam engine and the power loom, made it possible to produce goods more quickly and efficiently. This led to the development of factories and mass production.

The Industrial Revolution also saw the rise of new types of makers. These makers were often engineers and scientists who were able to use their knowledge to develop new products and processes.

One of the most important makers of the Industrial Revolution was George Stephenson. Stephenson was a British engineer who developed the steam locomotive. The steam locomotive was a major factor in the development of the railroad system, which revolutionized transportation.

Modern Makers

The Industrial Revolution laid the foundation for the modern era of making. Today, makers have access to a wide range of tools and technologies that allow them to create anything they can imagine.

One of the most important developments in the modern era of making is the rise of the digital maker. Digital makers use computers and other digital tools to design and create objects.
